

High-speed Sectional Door.

The best combination of a sectional door and a high-speed door.

Technical description.

Inkema's High-speed Sectional Door offers a unique combination of speed and ease of use, combining the best of sectional doors with rapid doors in a single system. This door has been designed to reduce the door opening time, which means great energy savings.

At the same time, it has been designed for both indoor and outdoor use, being an extremely resistant door, with two possible combinations: panel construction or with transparent sections, which gives us greater security thanks to greater visibility.

Applications.

PSER High-speed Sectional Door is extremely suitable for indoor and outdoor installation, useful for replacing sectional doors and/or high-speed doors.

The PSER is available with various guide systems, making it comparable to the installation of standard sectional doors.

Our door is reliable and easy to use, so it can be installed and used in many places.

Inkema PSER High-speed Sectional Door has been designed and calculated in accordance with the following European directives and regulations: **UNE-EN 13241**.

PSER versions:

Glazed version:

The PSER glazed high-speed sectional door is suitable for being able to see what is happening on both sides of the door, adding extra security.

Panel version:

The PSER high-speed sectional door with panels is extremely robust and suitable for indoor and outdoor use, for greater security they can be equipped with transparent sections.
