

2 or 3 Color LED Traffic Light.

Increases Safety When Loading And Unloading Goods.

Technical Description.

These types of LED traffic lights consume less energy than conventional traffic lights, save energy and require less maintenance. They are also more resistant to impacts and vibrations. They offer a practical solution to signal to truck drivers that the loading process at a **loading dock has finished and they can leave**. They comply with international standards and regulations.

Operation.

Connecting 2 or 3 LEDs to our SADV control unit allows us to signal different possibilities of the loading and unloading process at a loading dock.

- Truck **approaching** or truck **positioned**.
- Door **open/closed**.
- Ramp in **rest position**.
- Chock **in place**.

The functioning of the different signals produced depends on the combination with the other necessary products.

Technical Specifications.

Some interesting facts about LED traffic lights:

- **Power supply:** 24 V a.c. - d.c. +/-10%
- **Weight:** 1.7 Kg.
- **Colors:** 2 lights (red, green) - model GE020010 3 lights (red, amber and green) - model GE020011
- **Lamp consumption:** 3W
- **Average lamp life:** 30,000 hours.
- **Protection level:** IP65
